Chip Category Strategic Review

Insights & Recommendations for H2 Planning

Prepared for: Julia, Category Manager

Prepared by: Quantium Retail Analytics Team

April 2026

Agenda

01 **Executive Summary**
Key findings & headline recommendations

02 **Category Overview**
Total sales, trends & market context

03 **Customer Segment Analysis**
Who buys, how often & what drives spend

04 **Brand & Pack Size Performance**
Revenue concentration & shelf opportunities

05 **Trial Store Results**
Stores 77, 86 & 88 — did the trial work?

06 **Strategic Recommendations**
Prioritised actions for H2 planning

Executive Summary

Pyramid Principle — lead with the answer

01

Target Mainstream Young Singles/Couples

Off-locate Tyrrells + small packs near discretionary zones — they pay the highest unit price ($4.07) and are 23% more likely to purchase Tyrrells

02

Prioritise Older Families for volume

Highest revenue segment ($156,864 / 8.7% of total) with 4.6 shopping trips per year — drive volume through promotions

03

Roll out new layout from Store 86

The only statistically significant trial result — +12.7% customer uplift (p=0.012). Quantium can identify priority rollout stores

04

Protect Kettle & 175g shelf space

Kettle drives 21% of category revenue ($390K). 175g + 150g together = 43% of all chip sales — shelf space must reflect this

Who Is Buying Chips?

#1

Older Families — Budget

$156,864

8.7% of total revenue

#2

Young Singles/Couples — Mainstream

$147,582

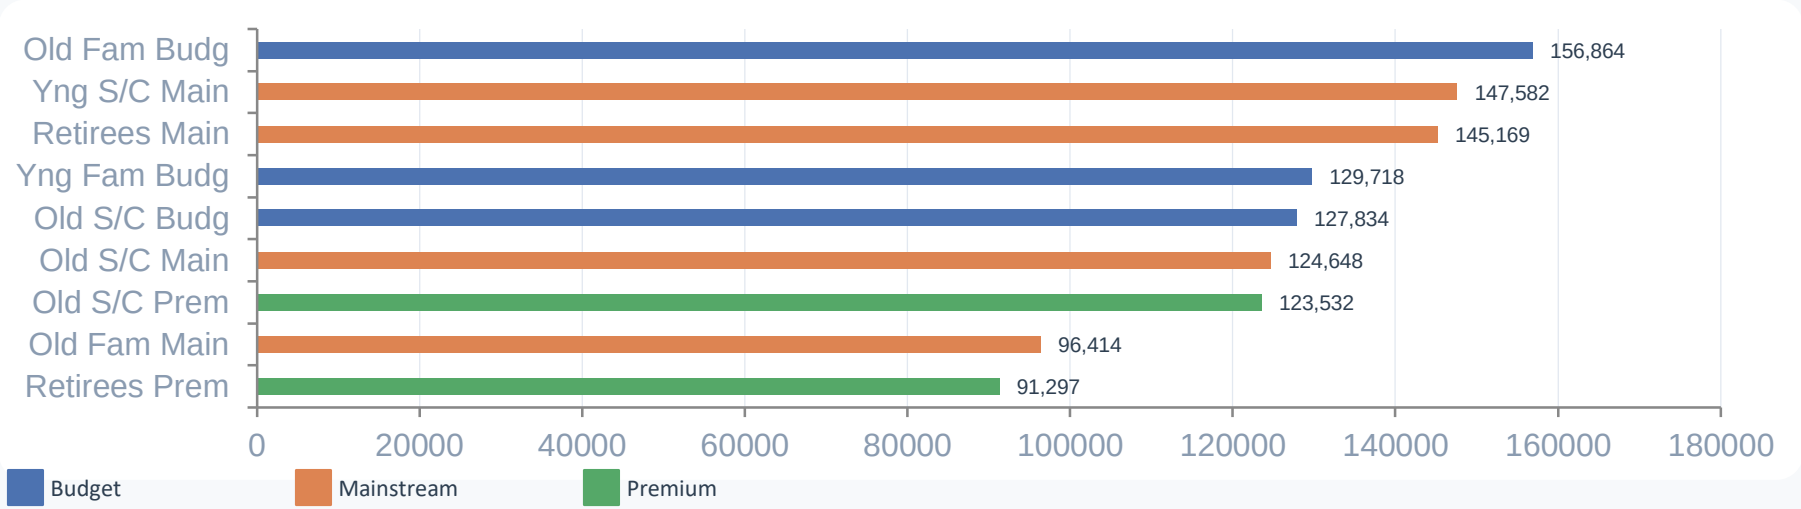
8.2% of total revenue

#3

Retirees — Mainstream

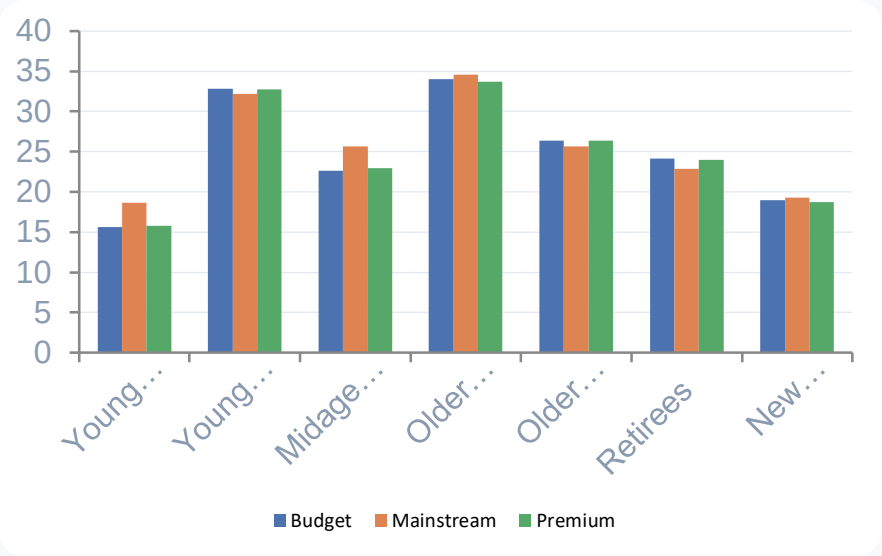
$145,169

8.0% of total revenue

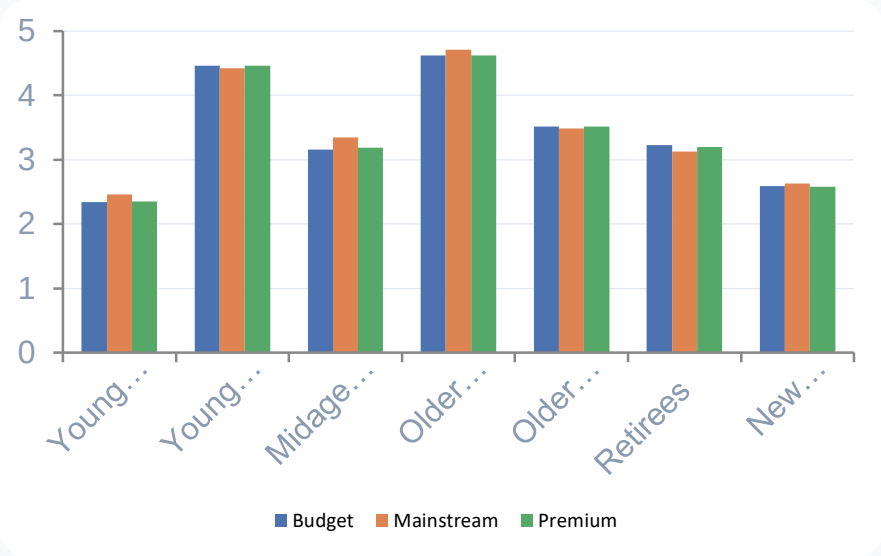


What Drives Their Spend?

Avg spend per customer ($)



Avg transactions per customer



Families spend $32–$35 per head AND visit 4.4–4.7x per year — habitual, high-value buyers

Frequency is driven by lifestage, NOT price tier — families buy chips regardless of budget

Impulse Buying Behaviour

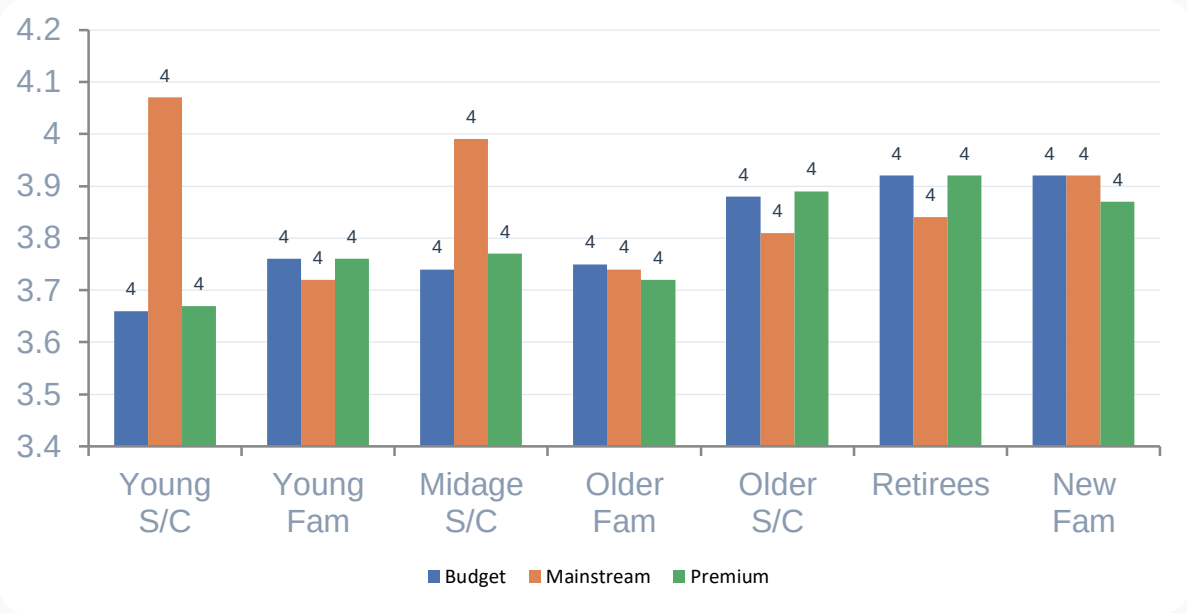
$4.07

Avg unit price paid by Mainstream Young Singles/Couples

Highest of all 21 segments

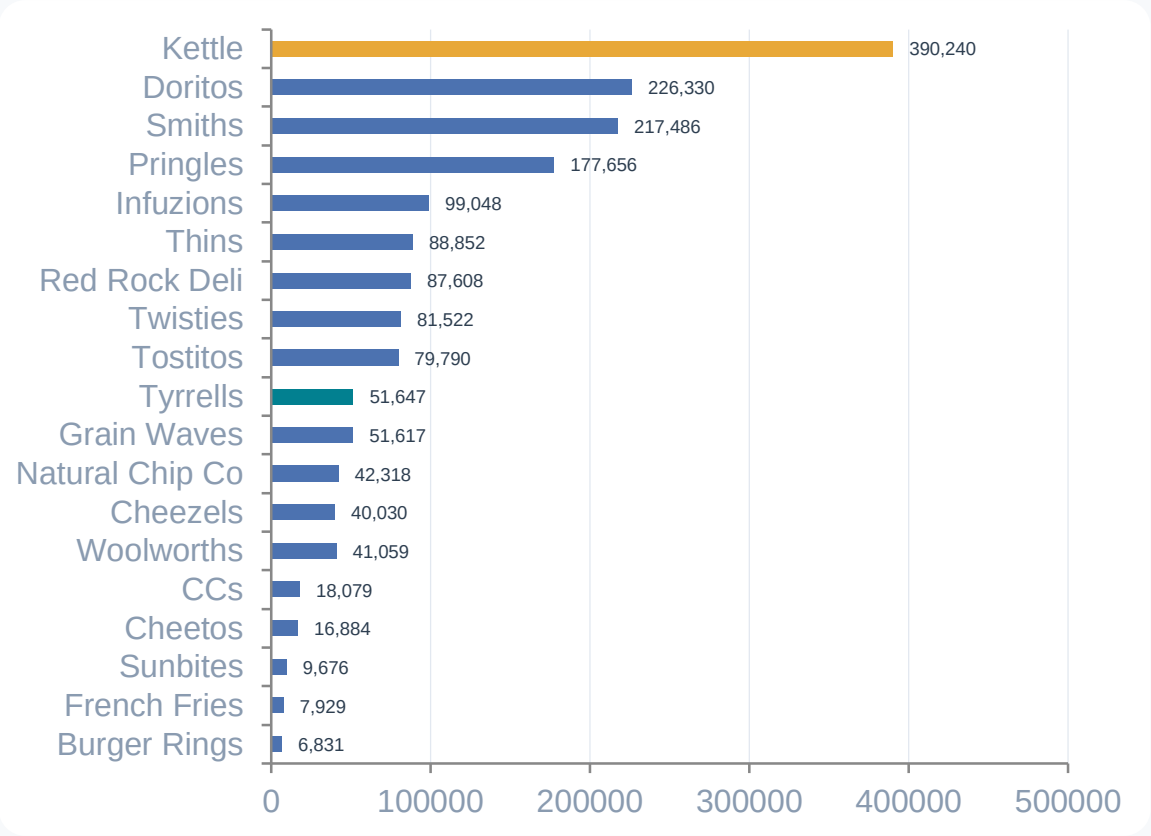
23%

more likely to purchase Tyrrells vs rest of population



Prices cluster tightly ($3.66–$4.07) — price alone cannot drive category growth. Volume, frequency and placement are the key levers.

Brand Performance



Kettle dominates

$390,240 — 21% of total category revenue. Nearly 2x second place.

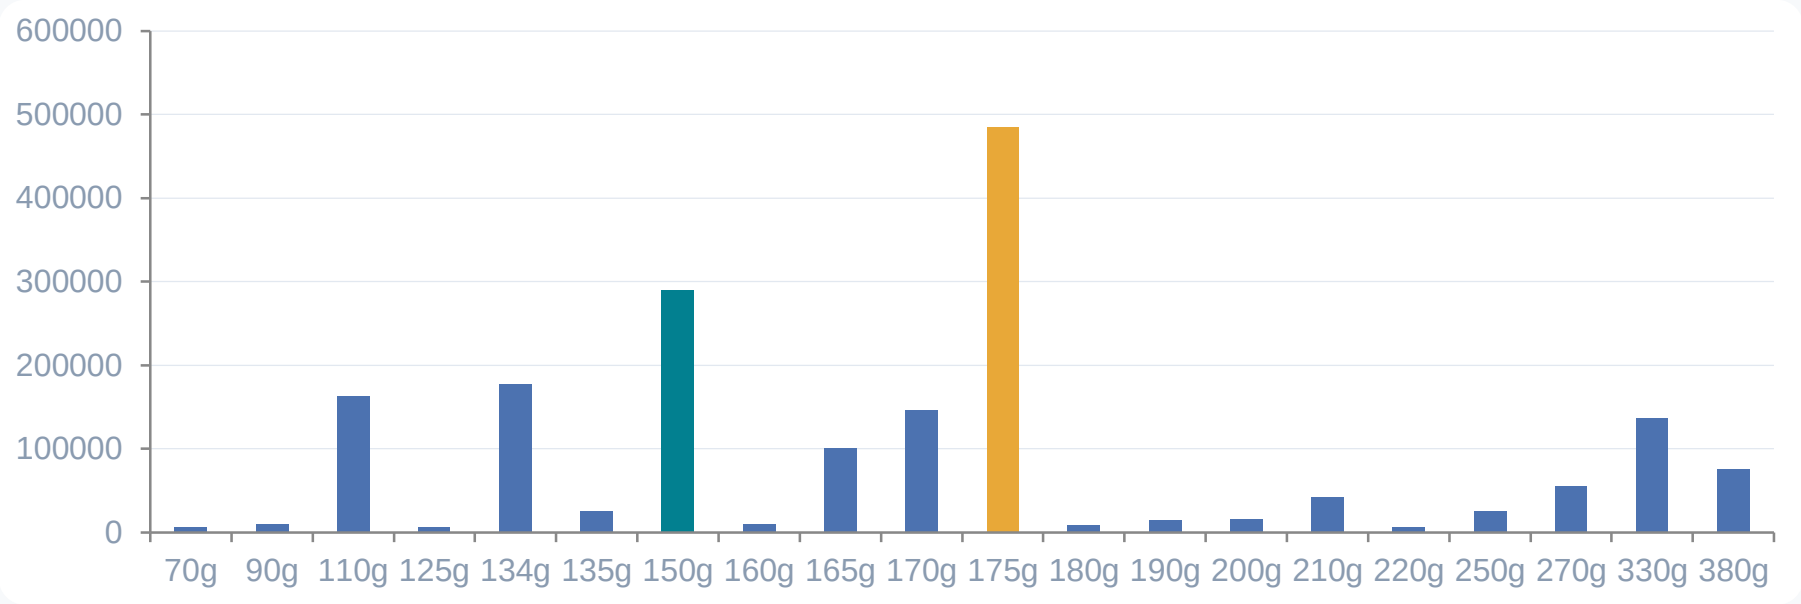
Tyrrells — impulse brand

Mainstream Young S/C are 23% more likely to buy. Off-location opportunity.

Bottom 6 brands

Under $20K each — combined 6% of revenue. Ranging review recommended.

Pack Size Performance



175g

$485K · 26% of revenue

#1 pack size

150g

$290K · 16% of revenue

#2 pack size

330g

$137K · 8% of revenue

Family sharing

70–125g

<$22K · <2% of revenue

Delist candidates

Trial Store Results

Feb – Apr 2019 | Stores 77, 86 & 88

KEY FINDING: The new layout consistently drives MORE CUSTOMERS into the chip category — not more spend per visit.

Store 77

Extend Trial

vs Control 233 | Match: 0.76

Sales Uplift	+27.8%
p=0.13	
Customer Uplift	+25.2%
p=0.15	
Txns/Customer	-1.8%

Commercially strong but not yet statistically significant — small store size limits power

Store 86

Roll Out

vs Control 155 | Match: 0.75

Sales Uplift	+11.6%
p=0.13	
Customer Uplift	+12.7%
p=0.012 ✓	
Txns/Customer	-0.2%

Customer uplift is statistically significant (p=0.012) — strongest result across all 3 stores

Store 88

Re-Trial

vs Control 91 | Match: 0.50

Sales Uplift	+8.6%
p=0.09	
Customer Uplift	+7.2%
p=0.24	
Txns/Customer	+1.2%

Positive trend but weak control match (0.50) — re-match control store before deciding

Strategic Recommendations

P1

Off-location placement — Tyrrells & small packs

- Place in discretionary zones near Young Singles/Couples areas
- Self-checkout, meal deal sections, convenience aisles
- Capitalise on $4.07 avg unit price + impulse behaviour
- Quantium can identify highest-priority store locations

P2

Roll out new layout — stores similar to Store 86

- Store 86 delivered +12.7% customer uplift (p=0.012 — significant)
- Target larger mainstream stores with similar demographics
- Extend Store 77 trial by 2–3 months (27.8% uplift, needs more data)
- Re-match control store for Store 88 before deciding

P3

Optimise shelf space — Kettle & 175g priority

- Kettle = 21% of category revenue — shelf must reflect dominance
- 175g + 150g = 43% of all sales — prioritise facings
- Review bottom 6 brands (<$20K each) for potential delisting
- Maintain 330g/380g support for family sharing occasions

P4

Target Older Families with volume promotions

- Highest revenue segment: $156,864 / 8.7% of total
- 4.6 shopping trips per year — most frequent chip buyers
- Respond well to bulk packs and multi-buy promotions
- Budget tier — price-sensitive, volume-driven

Next Steps

0–4 weeks

- Confirm Store 86 rollout store list with Quantium
- Brief store operations on layout changes
- Identify off-location sites for Tyrrells in priority stores
- Initiate Store 77 trial extension

1–3 months

- Execute rollout across priority mainstream stores
- Re-match control store for Store 88 and re-trial
- Begin tracking customer uplift in rollout stores
- Review ranging — shortlist brands for potential delisting

3–6 months

- Measure rollout impact via Quantium analytics
- 175g/150g shelf space review across full network
- H2 category review with updated full-year data
- Present consolidated findings to Julia
